

Test External Service

The quickest way to test it is on the command line, using the `curl` command. The plugin requires two steps:

1. Login for token;

```
curl --data  
"username=<username>&password=<pw>&service=Practical_Grades"  
<moodleurl>/login/token.php
```

2. Make request with public token from Step 1.

```
curl --data  
"wstoken=<token>&moodlewsrestformat=json&wsfunction=local_prac  
ticalgrader_save&activityidnumber=<activityid>&studentemail=<e  
mail>&activitygrade=<grade>"  
<moodleurl>/webservice/rest/server.php
```
